Professional summary

Full-stack developer with nearly 4 years of experience shipping automation and generative AI solutions to production. I build Python and FastAPI backends and Angular and React frontends, and integrate LLMs, speech-to-text and AI agents into real business processes. I use AI-driven development (Claude Code, OpenCode) in my daily workflow.

I designed an AI call-analysis solution that saves USD 4,000 per month and became a commercial product. I deploy with Docker on GCP and on self-hosted infrastructure, work in Scrum, take part in technical design and code review, and have mentored junior developers.

Technical skills

- **Generative AI and NLP:** LLMs (OpenAI, Claude, Gemini, OpenRouter), RAG (embeddings, chunking, LlamaIndex), AI agents (LangChain, LangGraph, Hermes Agent), function calling / tool use, MCP, chatbots, OCR and document classification, speech-to-text (WhisperX), text-to-speech, vision models, prompt engineering, prompt caching
- **Models and inference:** Hugging Face Transformers, PyTorch, fine-tuning (LoRA), vLLM, llama.cpp, quantization (GGUF), Ollama, image and video generation (ComfyUI), decision models (Laya)
- **AI-driven development:** Claude Code, OpenCode, agent workflows with MCP and Agent Skills
- **Backend:** Python, FastAPI, Flask, REST APIs, Node.js, NestJS, WebSockets and SSE (streaming), Celery, RabbitMQ, Kafka, asynchronous processing
- **Frontend:** Angular (17+, signals), React, TypeScript, JavaScript
- **Data and databases:** PostgreSQL, MySQL, Redis, query optimization; Pandas (data cleaning, transformation and ETL)
- **Cloud and DevOps:** Docker, Docker Compose, GCP, AWS, CI/CD (GitLab CI, GitHub Actions), Linux, Nginx, Dokploy, Git (GitHub, GitLab, Azure DevOps)
- **Automation:** Selenium, Playwright, UiPath, Automation Anywhere
- **Security and privacy:** JWT, OAuth2, prompt injection defense, personal data handling, access control
- **Practices:** Scrum, technical design, code review, mentoring

Professional experience

Automation Developer — GroupCOS

July 2023 – July 2026 · Bogotá, Colombia (remote)

- Designed and deployed an end-to-end call-analysis solution: self-hosted WhisperX (speech-to-text) integrated with ChatGPT to evaluate agents and generate automated feedback.

- The solution saves USD 4,000 per month in external API costs (Deepgram) and was packaged as a commercial product for new clients.
- Built an OCR tool to validate PDF invoices, extracting personal data and amounts and verifying them automatically.
- Built WhatsApp bots and AI agents with the OpenAI API, integrated into operational workflows; adapted pretrained Hugging Face models to business use cases.
- Built REST APIs with Python and FastAPI (and Node.js/NestJS) for SaaS products integrating internal services, databases and third-party APIs.
- Developed Angular and React frontends with TypeScript, connected to backend services.
- Deployed containerized applications with Docker on GCP using GitLab CI/CD, and optimized MySQL databases for performance and consistency.
- Automated data processes with Python, Selenium and Pandas, eliminating repetitive manual work.
- Processed call recordings and customer personal data under access and privacy controls.
- Mentored junior developers and interns, and translated client and business-area needs into technical requirements in a Scrum team.

RPA Developer — Net Applications

October 2022 – July 2023 · Bogotá, Colombia

- Built RPA bots with UiPath and Automation Anywhere to automate client processes.
- Developed Python scripts to automate operational workflows and optimized MySQL databases.

Systems Analysis and Development Apprentice — Siemens Energy

April 2022 – October 2022 · Bogotá, Colombia

- Structured and transformed operational data to produce decision-support reports.

Projects

Self-hosted deployment platform

- Run a Linux VPS with Docker and Dokploy to deploy and operate my applications and a private Git server.

Education

- **B.S. in Systems Engineering** — UNIMINUTO · In progress (7th of 9 semesters)
- **Technologist in Information Systems Analysis and Development** — SENA · 2020 – 2022
- **Mision TIC 2022, Software Development (800 hours)** — Universidad Sergio Arboleda · 2021

Languages

- Spanish: native
- English: B2 (conversational)
